PROFESSIONAL SUMMARY

Offensive Security professional with hands-on experience in penetration testing, ethical hacking, vulnerability assessment, and red team operations. Skilled in web application security (OWASP Top 10), Active Directory attacks, privilege escalation, and post-exploitation. Solved 50+ HackTheBox machines. OSCP-track certified. Builds open-source security tooling. Experienced with MITRE ATT&CK mapping, exploit development, and professional pentest report writing.

EXPERIENCE

Offensive Security Trainee *2026 – Present*

Independent Labs — HackTheBox, TryHackMe, OSCP-Track — Remote

- **50+ HackTheBox machines** solved; built full attack chains from external recon to full domain compromise.
- Performed web app pentests: SQL injection, XSS, LFI/RFI, command injection, auth bypass, and file upload abuse.
- Executed Active Directory attacks: Kerberoasting, Pass-the-Hash, NTLM relay, credential dumping, and lateral movement.
- Delivered pentest reports with CVSS risk ratings, PoC exploits, MITRE ATT&CK mapping, and remediation recommendations.
- Toolchain: Nmap, Burp Suite, Metasploit, BloodHound, CrackMapExec, Mimikatz, Wireshark, Netcat, custom **Python/Bash** scripts.

PROJECTS

Brief — Pentest Methodology Analyzer (CLI) *Feb 2026*

- CLI tool that records terminal sessions during CTF/lab assessments and uses a Hugging Face LLM to generate structured methodology audit reports (.md/.html); improved enumeration discipline **~30%** in lab runs.

Noo VM — Browser-Based Cybersecurity Training Lab – [https://noovm.github.io/] *Jan 2026*

- Zero-VM browser simulation (GitHub Pages + Cloudflare Workers) with **15+ staged attack scenarios** covering network recon, privilege escalation, web security, and Active Directory; AI output constrained via JSON schema validation.

Witan — Security Discord Mentor Bot *Jan 2026*

- AI Discord bot with real-time URL threat scanning (VirusTotal, Google Safe Browsing, AlienVault OTX), OSCP/CEH learning roadmaps, and goal tracking; **5,000+ queries** served at **99.2% exploit-filter accuracy**.

EasyNote — HTB-Style Vulnerable Linux Machine *Nov 2025*

- Designed full attack chain (SQLi → PHP webshell → SSH key theft → sudo/cron root escalation); produced **13-page pentest report** with risk ratings and remediation aligned to industry standards.

Goat Hash — Client-Side Hash Lookup Engine - [https://goathash.github.io/] *May 2025*

- Zero-backend, privacy-first MD5/NTLM/SHA1/SHA256 lookup over **14.3M records** in-browser; **75% bandwidth reduction** via HTTP Byte-Range sharding and 4-thread WebWorker SHA scanning.

EDUCATION

Bachelor of Computer Science (BCS) *2019 – 2022*

Willingdon College, Sangli — CGPA: 9.15 / 10

CERTIFICATIONS

Completed:

- Cyber Threat Intelligence 101 — arcX *Jun 2025*
- Jr. Penetration Tester — TryHackMe *Aug 2024*
- Star Cloud Computing — Star Certification *Mar 2021*
- Ethical Hacking Expert R11 [EHE] — Star Certification *Mar 2021*
- Star Cyber Secure User — Star Certification *oct 2019*

In Progress:

- Offensive Security Certified Professional (OSCP)
- Certified Penetration Testing Specialist (CPTS)

SKILLS

Penetration Testing: Network Pentesting, Web Application Security, Active Directory Attacks, Red Team Operations, Privilege Escalation, Lateral Movement, Post-Exploitation, Vulnerability Assessment, Exploit Development

Web Security: OWASP Top 10, SQL Injection, XSS, Command Injection, LFI/RFI, Auth Bypass, File Upload Abuse, SSRF

Active Directory: Kerberoasting, Pass-the-Hash, Pass-the-Ticket, NTLM Relay, DCSync, BloodHound, CrackMapExec, Mimikatz

Tools: Nmap, Burp Suite, Metasploit, Wireshark, Netcat, Nessus, Nikto, Gobuster, Hydra, John the Ripper, Hashcat

Development: Python, Bash, PowerShell, JavaScript, HTML/CSS, Node.js

Frameworks: MITRE ATT&CK, OWASP, PTES, CVSS
