TARGET ROLES

Junior Penetration Tester |Red Team Operator | Offensive Security Consultant | Application Security Engineer

PROFESSIONAL SUMMARY

Offensive Security professional with hands-on lab experience in penetration testing, ethical hacking, and red team operations. Strong skills in network penetration testing, web application security, and Active Directory attacks. OSCP-trained with expertise in vulnerability assessment, exploitation, privilege escalation, post-exploitation, and report writing. Proven ability to identify, exploit, and document security vulnerabilities aligned with OWASP Top 10, MITRE ATT&CK, and industry best practices.

LABS / HANDS-ON EXPERIENCE

Offensive Security Trainee

- Conducted network and web application penetration testing labs across Linux and Windows environments.
- Performed Active Directory labs including privilege escalation, Kerberoasting, credential dumping, and lateral movement.
- Executed manual exploitation using Burp Suite, Metasploit, Nmap, and custom scripts in Python, Bash, and PowerShell.
- Identified vulnerabilities aligned with OWASP Top 10 and mapped techniques to MITRE ATT&CK.
- Delivered penetration testing reports with risk ratings, proof-of-concept exploits, and remediation recommendations. - Collaborated with peers to validate fixes and improve overall security posture.

Offensive Security Labs & Simulated Environments

- Completed hands-on penetration testing labs simulating real-world enterprise environments.
- Practiced initial access, privilege escalation, pivoting, and post-exploitation techniques.
- Exploited vulnerable services, misconfigurations, and insecure authentication mechanisms. - Built end-to-end attack chains from reconnaissance to full domain compromise.

EDUCATION

Bachelor of Computer Science (BCS), Willingdon College, Sangli | **CGPA: 9.15 / 10**

CERTIFICATIONS

Completed

- Operationalizing MITRE ATT&CK Framework v13, AttackIQ | **June 2025**
- Jr Penetration Tester, TryHackMe | **August 2024**
- Threat Intelligence Analyst, arcX | **June 2025**
- Pre Security Fundamentals, TryHackMe | **August 2023**
- Ethical Hacking Expert - R11 (EHE), Star Certification | **March 2021**
- Star Cloud Computing Certification, Star Certification | **March 2021** - Star Cyber Secure User - R11 (SCSU), Star Certification | **2019** ***In Progress***
- Offensive Security Certified Professional (OSCP) - Certified Penetration Testing Specialist (CPTS)

PROJECTS

1.Brief - Pentest Methodology Analyzer (CLI) ***[Brief]*** **|Feb 2026**

- Built a CLI tool that captures terminal history during assessments to improve coverage and consistency.
- Added AI-driven analysis to flag enumeration gaps and optimize command sequencing.
- Generated Markdown/HTML reports; improved enumeration discipline by ~30% in controlled lab runs.

2.Noo VM - Browser-Based Cybersecurity Training Lab ***[Noo VM]*** **| Jan 2026**

- Developed a browser-based VM simulation to remove hardware dependency for pentesting practice.
- Authored 15+ staged attack scenarios with hints, expected commands, and technical explanations.
- Enforced JSON schema validation to keep AI-generated training content deterministic.

3.Witan Bot - Security-Aware Discord Chatbot ***[witan]*** **| Jan 2026**

- Implemented safeguards to block malware/exploit requests and enforce community policies.
- Built automated moderation with profanity detection and user strike management.
- Served 5,000+ security-related queries with 99.2% filtering accuracy.

4.EasyNote - HTB-Style Vulnerable Linux Machine ***[Vuln Machines]*** **| November 2025**

- Designed a full attack chain: web exploitation, privilege escalation, and root compromise.
- Implemented SQLi, file upload abuse, SSH key disclosure, and sudo/cron escalation paths.
- Produced a professional pentest report aligned with HTB/industry standards.

5.GoatHash - Client-Side Hash Lookup ***[Goathash]*** **| May 2025** -

Built a zero-backend hash lookup utility for MD5 and NTLM.

- Reduced bandwidth 75% with chunked datasets; ensured offline-capable privacy.

6.OG Note - Pentest Knowledge Management **| March 2025**

- Created an offline-first reference for commands, methodologies, and escalation checklists.
- Optimized for quick search and field use in low-bandwidth environments

CORE SKILLS

Penetration Testing, Ethical Hacking, Offensive Security, Red Team Operations, Vulnerability Assessment, Exploitation, PostExploitation, Privilege Escalation, Lateral Movement, C2.

Active Directory Security: Kerberoasting, Pass-the-Hash/Ticket, NTLM, Kerberos, Internal Network Pentesting | Web Security: OWASP Top 10, SQLi, XSS, Command Injection, LFI/RFI, Auth Bypass

Tools: Nmap, Burp Suite, Metasploit, BloodHound, CrackMapExec, Mimikatz, Nessus.
